Project: FUNDATA (Crowd Data Funding)

Beneficiaries: the entire research community

Abstract: in the same way that crowdfunding platforms (like Ulule) do, this proposal aims to develop a platform in which a researcher presents an idea/project and look for supporters that provide data/resources instead of only money.

With the same structure, we can find similar elements:

- **Projects:** a researcher or research team present an idea/project and explain what data/resources need to develop it.
- **Rewards:** each project defines a series of rewards for people who finally contribute in some way.
- **Supporters:** people who are interested in a project and want to contribute to it.
- **Endpoint:** infrastructure to share and describe data.

This project covers the design of the platform and the design and planning of its implementation. Given the terms of the call, stage of implementation, disseminate and platform management must be addressed as later lines.

Project lifetime:

- | | |
|--|--|
| <ul style="list-style-type: none">▪ Design System
(August to November)<ul style="list-style-type: none">○ System Architecture○ Functional Specifications○ Preliminary Design Specification○ Detailed Design Specifications | <ul style="list-style-type: none">▪ Design implementation
(November to January)<ul style="list-style-type: none">○ Analysis and planning of systems and software.○ Identification and planning of infrastructure and hardware. |
|--|--|

Result: Report with the design and planning of the platform implementation.

(No additional funds required)

Later lines:

**-> implementation -> disseminate -> platform management
(additional funds and extra-time required)**
